MANUFACTURING PROCESS

Phase A: Combine all ingredients of phase A and raise the pH to 11 under stirring to dissolve cinnamic acid. When everything is dissolved, lower the pH back to 6 again.

Add phase B to A and stir until everything is dissolved. Heat phase A/B to 75 °C.

Phase C: Combine all ingredients and heat to 80 °C. Add then phase C to phase A/B under strong stirring and homogenise. Adjust the pH to 5.5 ± 0.05.

SPECIFICATION

Appearance: White viscous emulsion

pH: 5.5 ± 0.05

Stability: No separation after centrifugation (4000 rpm, 30 min), stable for 3 months at room temperature and 40 °C

Microbiological stability: proven
