

Cosphaderm® VBE is a skin-warming active ingredient synthetically derived from vanillin and reminiscent of its characteristic scent. The unique warming effect with a fast onset and a long-lasting sensation is mechanically similar but less irritating than capsaicin. This effect, which is directly linked to vasodilation, as well as its ability to increase local blood flow, makes Cosphaderm® VBE a great alternative to capsaicin in many personal care applications from head to toe.

- Alternative to capsaicin
- Warming effect
- Boosts blood circulation
