

Cosphaderm® E NGM is a fluid lysolecithin derived from soybeans. Lysolecithin is an enzymatically modified derivative of lecithin from which one fatty acid has been removed. This results in increased emulsifying and dispersion properties in aqueous media leading to greater water-binding capacity. Due to their more hydrophilic character, lysolecithins are ideal co-emulsifiers for o/w emulsions with high water content. Beyond the co-emulsifier function, lysolecithin contributes to better hair combability in conditioners and a light and silky skin sensation in leave-on formulations.

- Natural fluid lysolecithin
- Enables development of lecithin-based emulsions with high water content and low viscosity
- Higher HLB (10-12) compared to standard lecithins

ISO 16128

Natural Index	0
Natural Origin Index	1

INCI-Name	Lysolecithin
Source	Soy
Recommended concentration [%]	0.50 - 5.00
Substance Class	Lecithins
Function	<ul style="list-style-type: none">• Emulsifying• Skin conditioning
Type of Formulation	<ul style="list-style-type: none">• O/W• W/O• Surfactant Based• Waterfree• Water-Based
Solubility	<ul style="list-style-type: none">• Oil-soluble
Appearance	Viscous liquid
Colour	Tan to amber
Odour	Characteristic
Item No.	05-003-xxxx
CAS No.	<ul style="list-style-type: none">• 85711-58-6
